Name: Y.Tharun

COURSE NAME : MANAGEMENT INFORMATION SYSTEM

Reg NO: 192110204

- 1) Draw a UML diagram for hotel reservation system. In a hotel reservation system, a customer can make online booking for a hotel, by specifying the accommodation requirements such as type of room (AC/Non-AC, One bed/two bed), total no of rooms, duration of stay. The system selects a suitable hotel as per customer's requirements. If a hotel is found then the availability of rooms in that hotel is checked. The charges are calculated for the selected requirement and these are acknowledged to the customer. If the customer is satisfactory about the selection made by the system, then he confirms the reservation.

Aim: Draw a UML diagram for hotel reservation system. In a hotel reservation system, a customer can make online booking for a hotel, by specifying the accommodation requirements such as type of room (AC/Non-AC, One bed/two bed), total no of rooms, duration of stay.

Procedure:

1. **Customer Login/Registration**
 - The customer logs into the system or registers if they are a new user.
2. **Specify Accommodation Requirements**
 - The customer enters details such as room type (AC/Non-AC, single/double bed), number of rooms, and duration of stay.
3. **Search for Suitable Hotels**
 - The system searches for hotels that match the customer's requirements.
4. **Check Room Availability**
 - The system verifies room availability in the selected hotels.
5. **Calculate and Display Charges**
 - The system calculates the total cost based on selected rooms, duration, and hotel pricing.
6. **Acknowledge Charges to Customer**
 - The system displays the charges for customer approval.
7. **Customer Confirms Reservation**
 - If satisfied, the customer proceeds with confirming the booking.
8. **Make Payment**

- The customer completes the payment through the system's payment gateway.

9. Generate Booking Confirmation

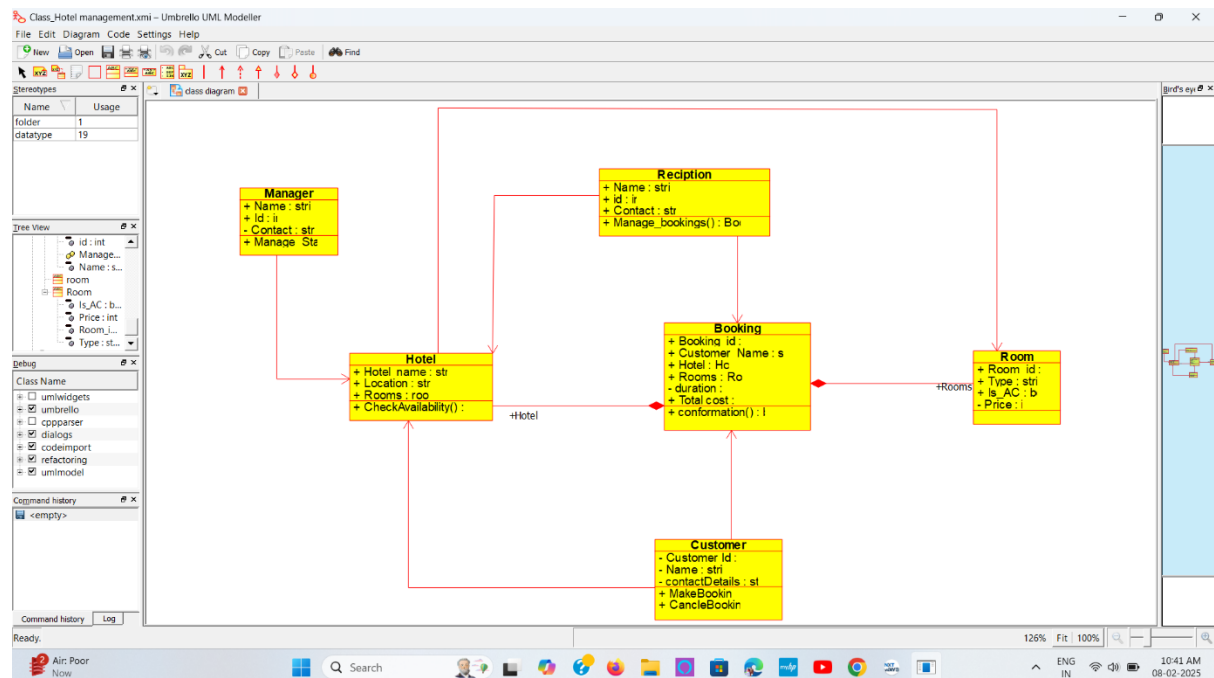

- Upon successful payment, a booking confirmation receipt is generated and sent to the customer.

10. Update Hotel Database

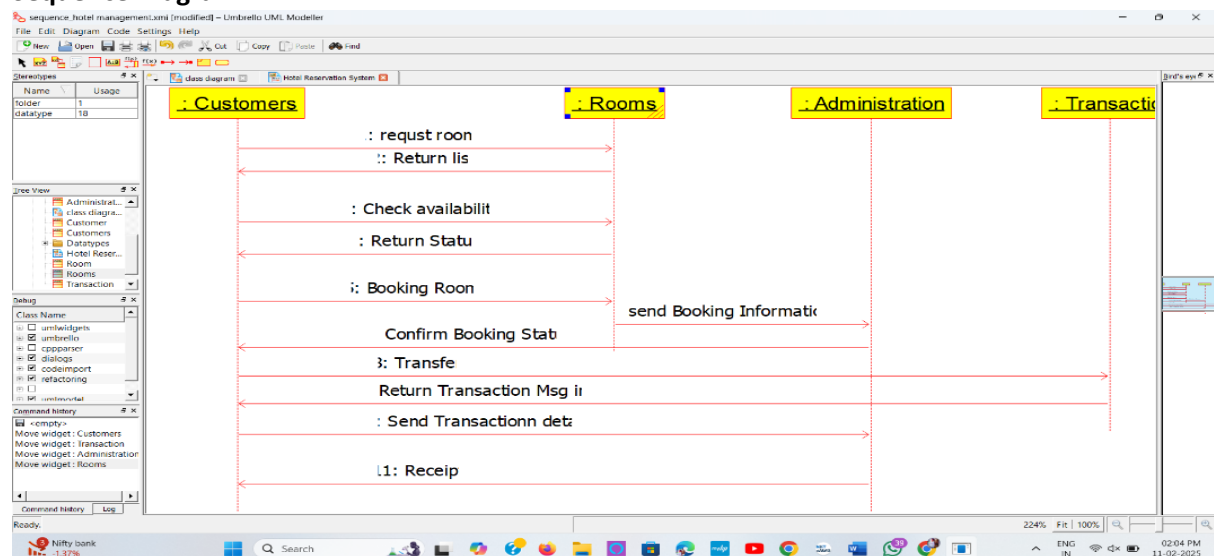

- The system updates the hotel database to reflect the new reservation and reduce available rooms.

Result:

The **UML diagram** for the **Hotel Reservation System** effectively represents the interaction between **customers, the system, and hotels**, ensuring a smooth booking process. It streamlines room availability checks, cost calculations, and reservation confirmations, enhancing user experience and efficiency.
