DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

COURSE CODE : CSA40

Name: Y.Tharun

COURSE NAME : MANAGEMENT INFORMATION SYSTEM

Reg NO: 192110204

3) Make an Online Airline Reservation System. The activities of the Online Airline Reservation system are listed below user, admin, LOGIN, MANAGE CLASSES, MANAGE WAITING LIST, MANAGE HOLDS, MANAGE DEADLINES, LOGOUT, using this has a step-by-step process draw a CLASS diagram.

Aim: To design a **UML Diagram** for an **Online Airline Reservation System** that manages user and admin interactions, including booking, managing classes, handling waiting lists, and deadlines.

Procedure:

1. User/Admin Login

- Users and administrators log into the system using valid credentials.

2. User Searches for Flights

- The user enters details like departure and arrival locations, date, and class preference (Economy/Business).

3. Check Flight Availability

- The system checks seat availability for the selected flight and class.

4. Manage Waiting List (If Needed)

- If seats are unavailable, the system adds the user to the waiting list.

5. Seat Selection & Reservation

- If seats are available, the user selects a seat and proceeds with the reservation.

6. Payment Processing

- The user makes a payment using available options (credit/debit card, UPI, etc.).

7. Generate Ticket & Confirmation

- Once payment is successful, the system generates a ticket and sends a confirmation email.

8. Admin Manages Holds & Deadlines

- The admin can hold seats for specific customers and manage deadlines for bookings.

9. Modify or Cancel Reservation (if required)

- Users can modify or cancel their reservations before the deadline.

10. User/Admin Logout

- The user or admin logs out after completing their actions.

ER Diagram:

Result:

The **Class Diagram** for the **Online Airline Reservation System** efficiently models the interaction between **Users, Admin, and the system components like Login, Class Management, Waiting List, Holds, and Deadlines**. It ensures proper handling of flight reservations, seat classifications, and user authentication, improving efficiency and management of airline bookings
