SAVEETHA INSTITUTE OF MEDICAL AND TECHNICAL SCIENCES

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

COURSE CODE : CSA40

Name: Y.Tharun

COURSE NAME : MANAGEMENT INFORMATION SYSTEM

Reg NO: 192110204

5) Draw a UML diagram for a food ordering system Systems. The activities of the food ordering system are listed below. Receive the Customer food orders, Produce the customer ordered food, Serve the customer with their ordered food, collect payment from Customers, Store customer payment details, Order Raw Materials for food products, Pay for Raw Materials and Pay for Labour.

Aim:

To design a UML Diagram for a Food Ordering System, illustrating the interactions between customers, kitchen staff, payment processing, and inventory management for efficient food order processing.

Procedure:

1. Customer Places Order

- The customer selects food items and confirms the order.

2. Order Processing

- The system records the order and sends it to the kitchen.

3. Food Preparation

- Kitchen staff prepares the ordered food based on the request.

4. Serve the Food

- The prepared food is served to the customer (dine-in or delivery).

5. Collect Payment

- The customer makes the payment via cash, card, or online methods.

6. Store Payment Details

- The system securely stores customer payment records.

7. Manage Raw Materials

- The system monitors inventory and places orders for raw materials when needed.

8. Process Supplier Payments

- Payments are made to suppliers for raw materials.

9. Manage Labor Costs

- The system tracks and processes labor payments.

10. Update Order & Inventory Logs

- The system updates order history and stock levels.

Observation

Component Diagram...

Deployment Diagram...

Entity Relationship Diagram...

Result:

The UML diagram for the Food Ordering System was successfully designed, illustrating customer order processing, payment handling, inventory management, and labor cost tracking. This ensures efficient restaurant operations and improved service quality.
