COURSE CODE : CSA40

Name: Y.Tharun

COURSE NAME : MANAGEMENT INFORMATION SYSTEM

Reg NO: 192110204

7) Draw a UML diagram for online purchasing system. Provide top level use cases for a web customer making purchases online. Web customer actor uses some web site to make purchases online. Top level use cases are View Items, Make Purchase and Client Register.

Aim:

To design a UML Use Case Diagram for an Online Purchasing System, illustrating interactions between the Web Customer and the System for viewing items, making purchases, and client registration.

Procedure:

1. Customer Visits Website

- The web customer accesses the online store.

2. View Items

- The customer browses different product categories and views item details.

3. Add Items to Cart

- The customer selects items and adds them to the shopping cart.

4. Register/Login (If Not Already Done)

- New customers register an account, while existing users log in.

5. Proceed to Checkout

- The customer reviews the cart and proceeds with the purchase.

6. Enter Payment & Shipping Details

- The customer provides payment details and selects a shipping method.

7. Confirm Purchase

- The system processes the payment and generates an order confirmation.

8. Receive Order Confirmation

- The customer gets an email/SMS with order details and tracking information.

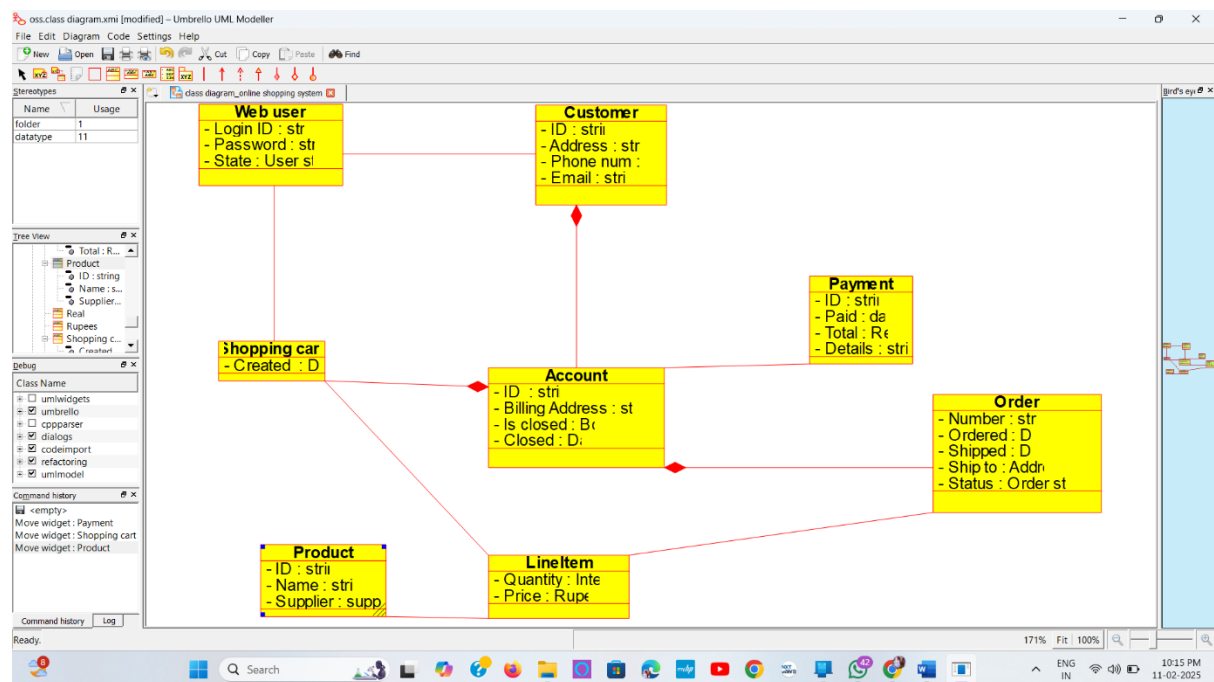

9. Track Order (Optional)

- The customer can track the shipping status through the website.

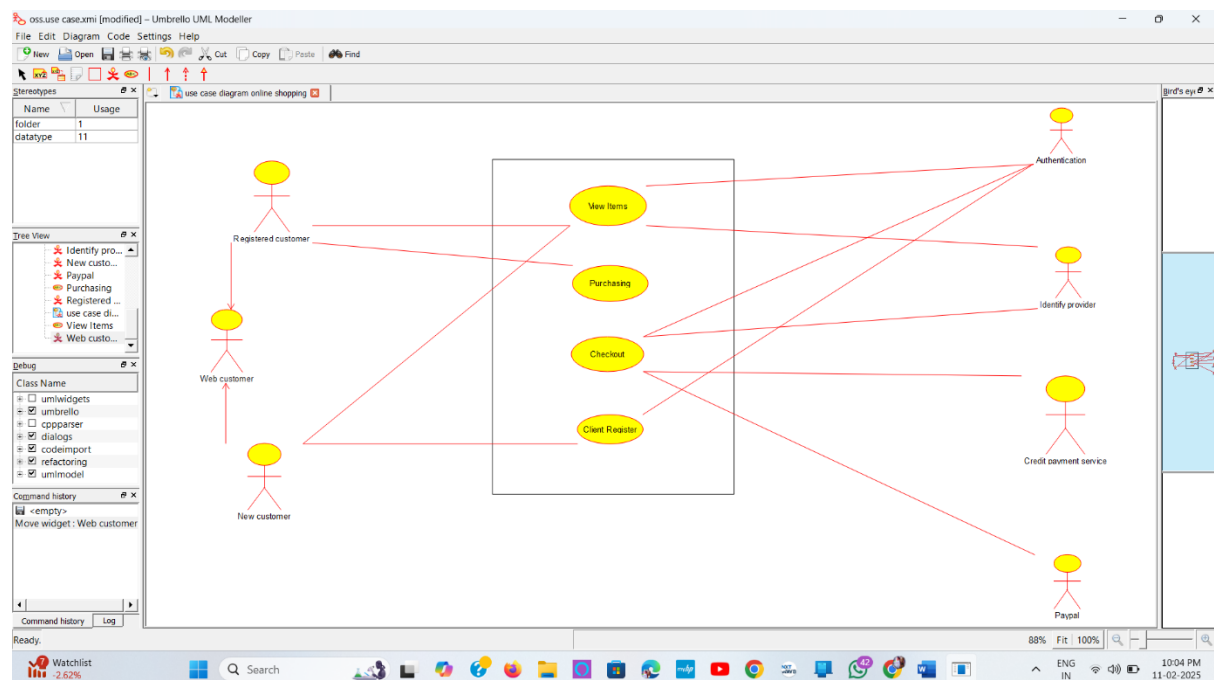

10. Log Out

- After completing the purchase, the user logs out for security.
